[57] 摘要

提供了一种有机发光器件。 该器件包括阳极、 阴极和放置在阳极和阴极之间的发射层。 该发射层包括具有结构(I)的材料, M 为原子量大于 40 的金属, m 至少为 1, n 至少为 0, R "为 H 或任意的取代基, X 为辅助配体, 且 A 选自芳环或杂芳环,和 B 为芳环。 还提供了包括上述材料的光敏配体的材料。

Abstract not available for CN1726606
Abstract of corresponding document: **US6687266**

An organic light emitting device is provided. The device includes an anode, a cathode, and an emissive layer disposed between the anode and the cathode. The emissive layer includes material having the structure: M is a metal having an atomic weight greater than 40, m is at least 1, n is at least zero, R" is H or any substituent, X is an ancillary ligand, and A is selected from the group consisting of aryl and heteroaryl rings, and B is an aryl ring. A material including the photoactive ligand of the above material is also provided.

$$\begin{bmatrix} A \\ A \\ B \end{bmatrix}_{m}$$
